Conservation Science

\$5-23 billion

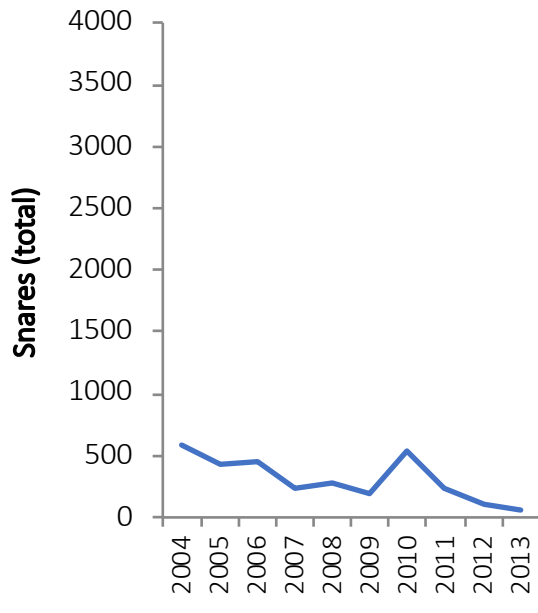

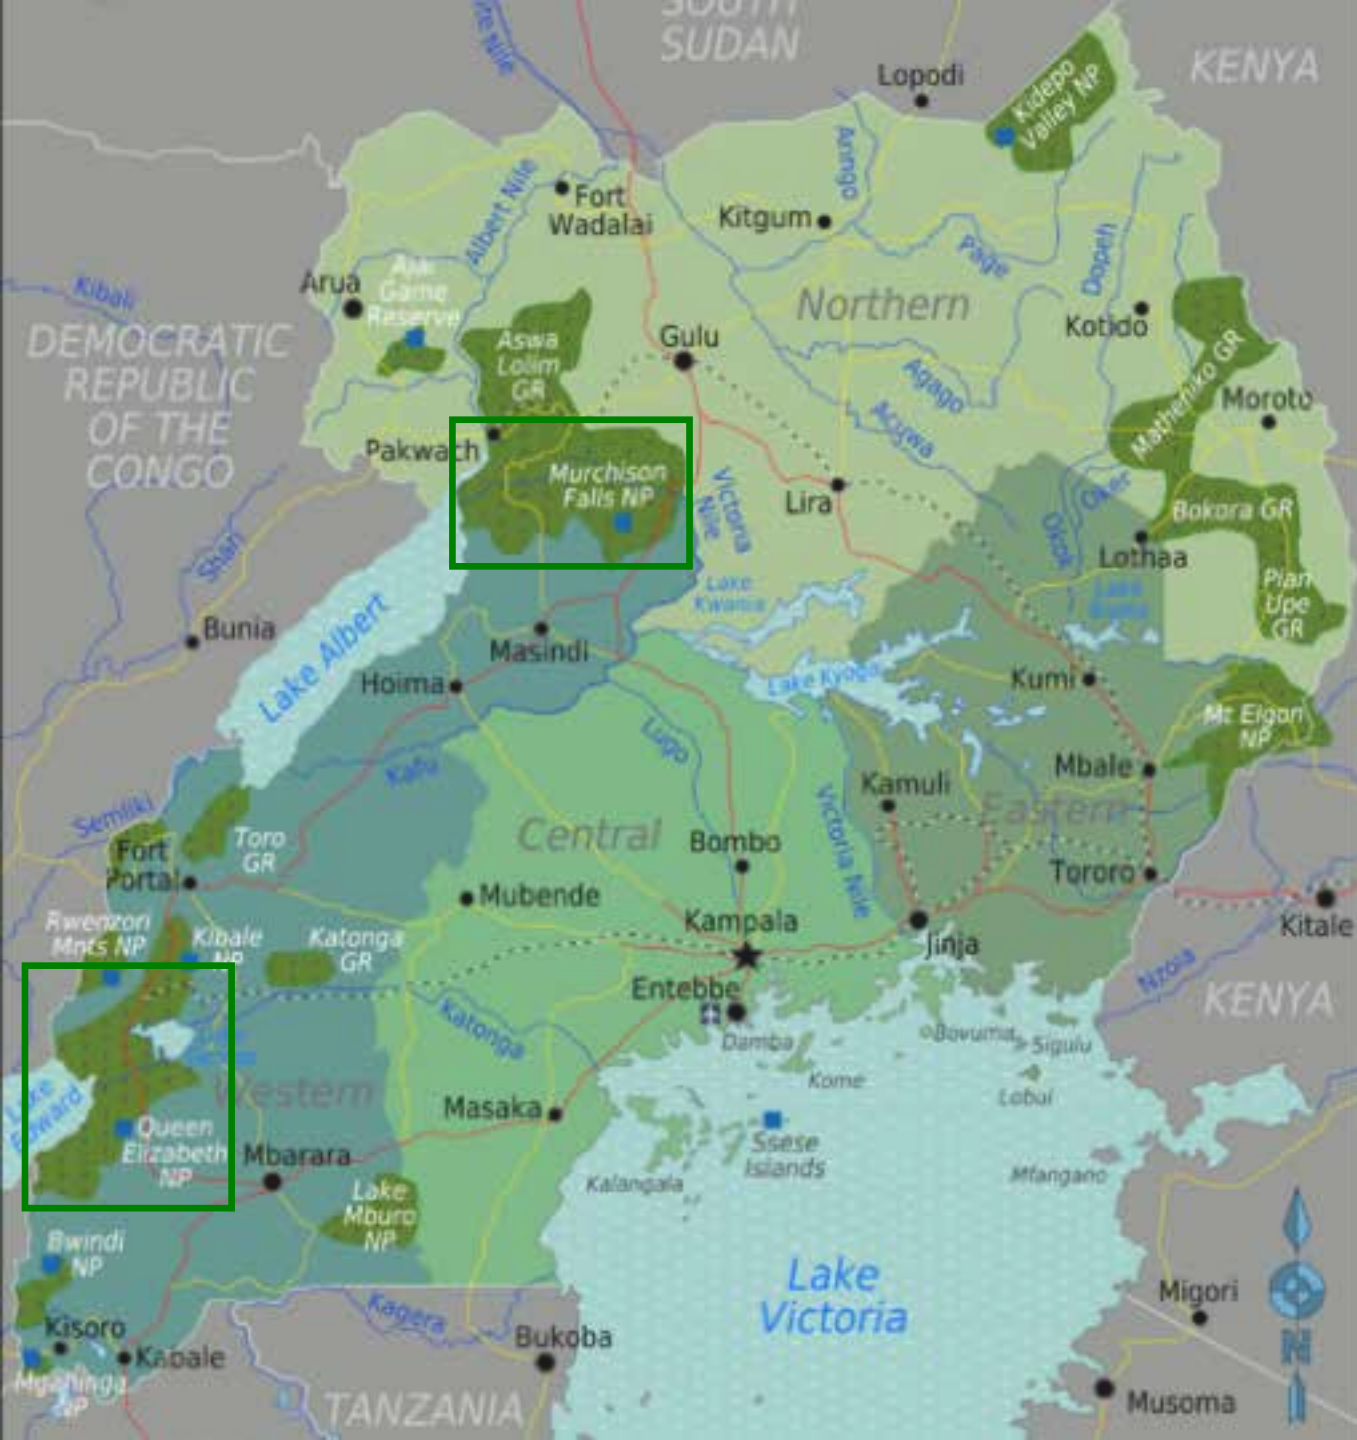

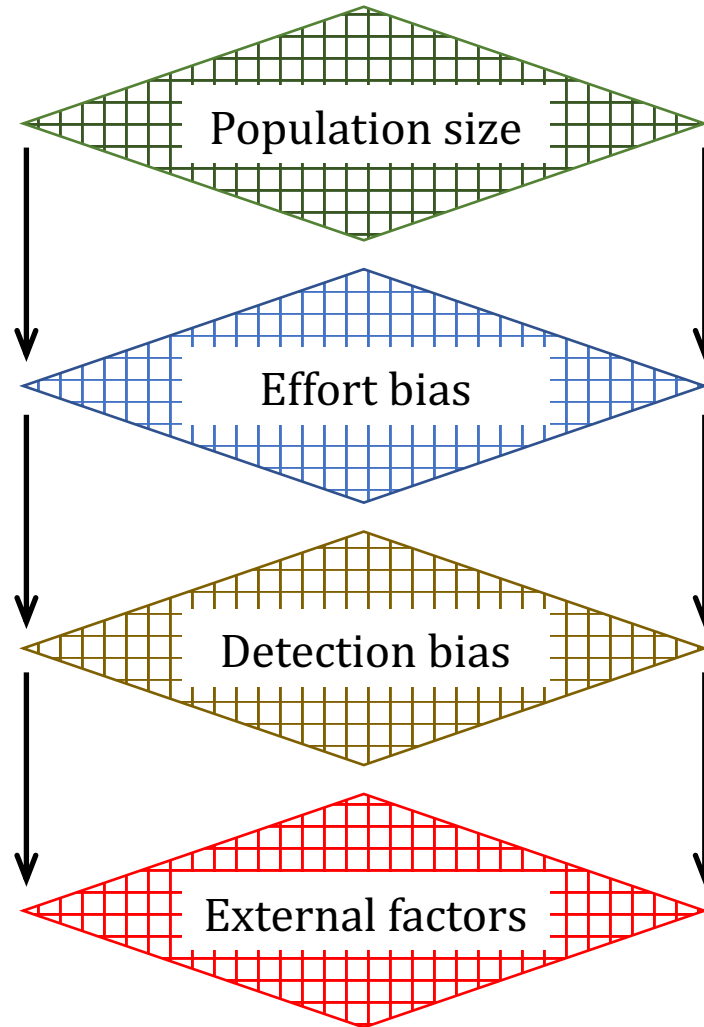

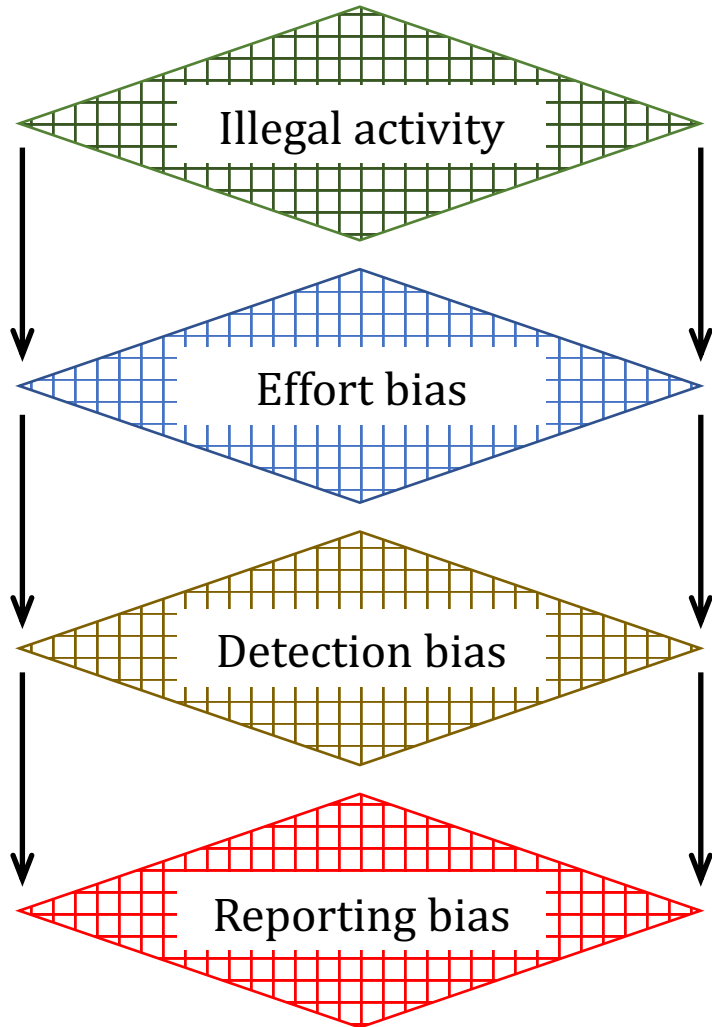

REASON FOR CHANGE	ESTIMATES FROM SURVEYS	
	ESTIMATE	± 95% CL
Repeat Survey	-89,504	±28,943
New Population	+1,572	±2,956
Different Technique	-876	±821
Different Area	+2,288	±2,373
Data Degraded	0	0
Totals	-86,320	±29,202

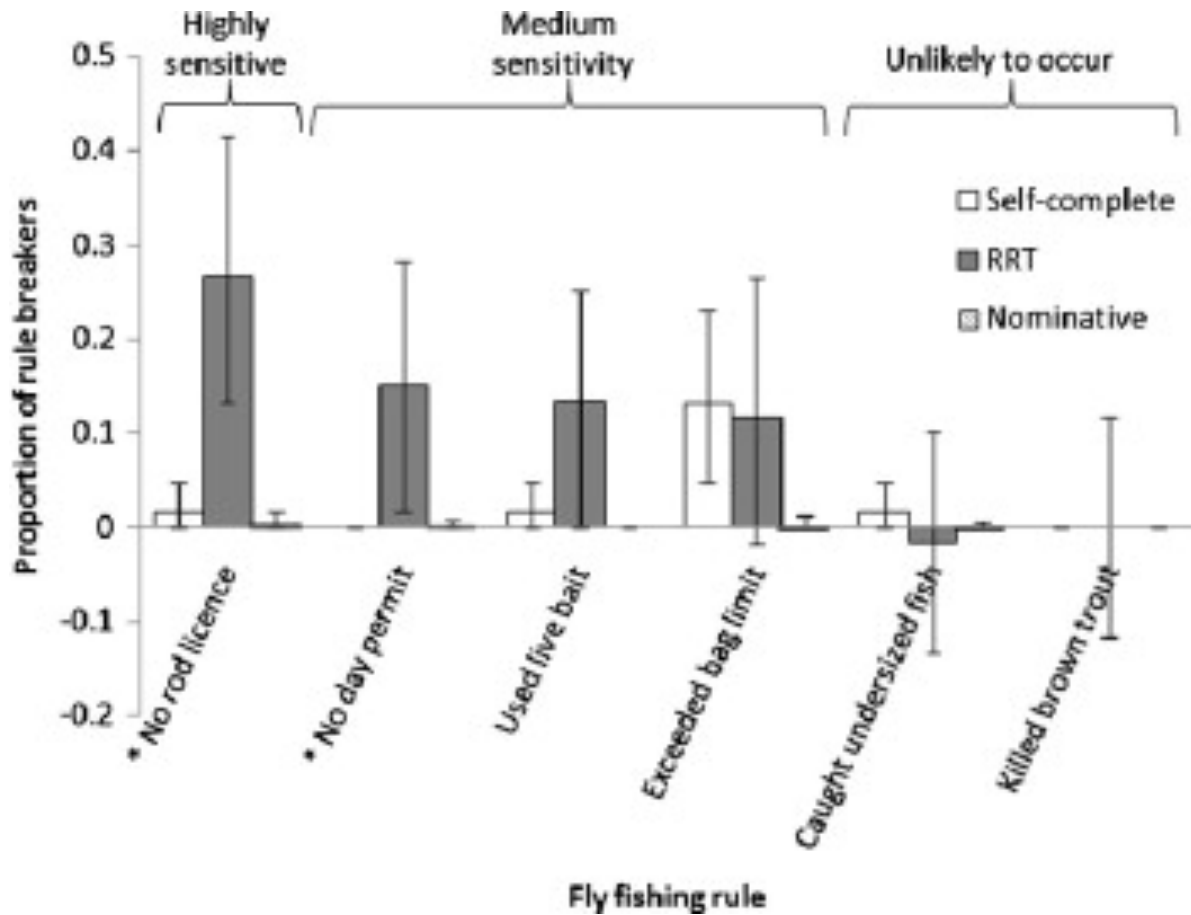

- How big is the problem?
- Who is involved?
- What are the underlying drivers?
- Which interventions are most likely to succeed?

Ranger patrol and population data both subject to significant uncertainty and biases

Challenging to get truthful responses to sensitive questions through direct questioning

A more robust approach makes use of indirect questioning

Farming

Fishing

Raising livestock

Salaried employment

Card E

Farming

Hunting for selling

Fishing

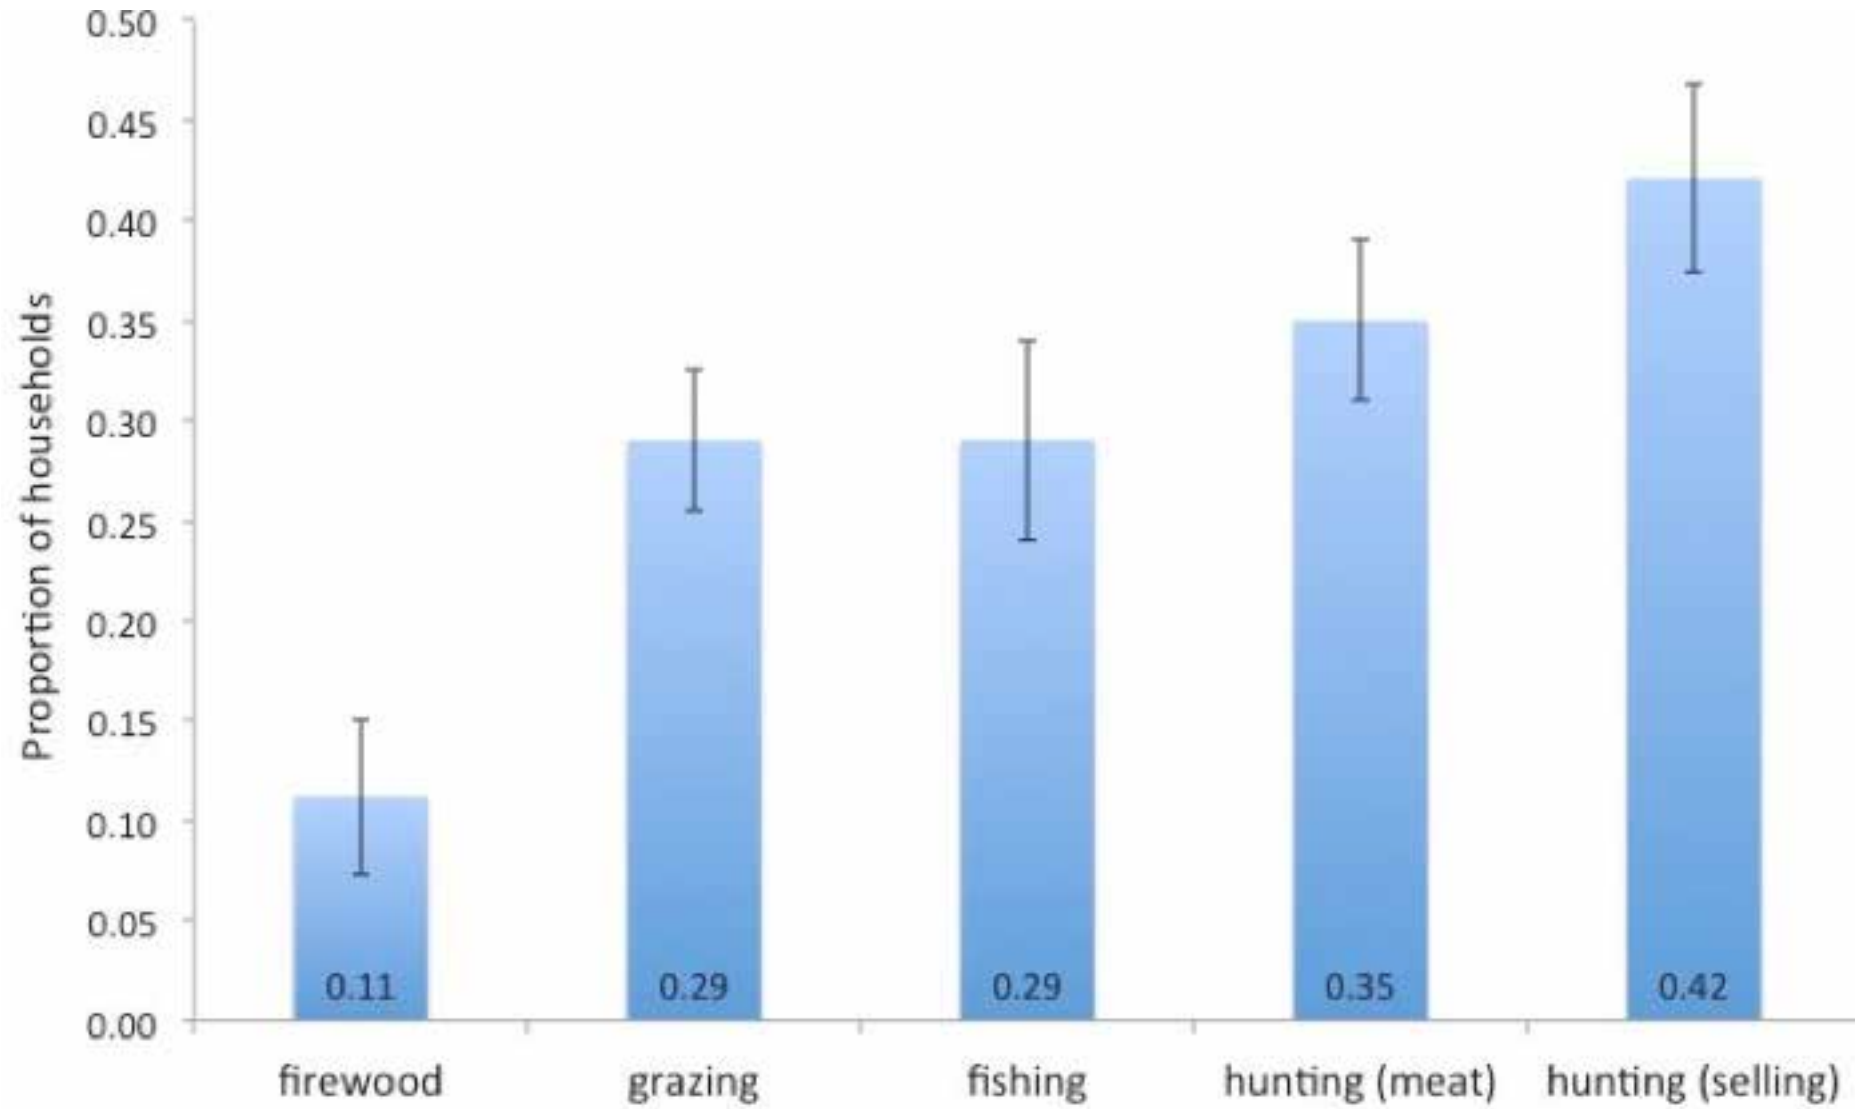

Raising livestock

Salaried employment

Card E

Firewood collection

Commercial hunting

Better-off households and households that reporting suffering from crop raiding or livestock predation or felt that they had not received a benefit from revenue sharing were all more likely to hunt illegally

Interventions

HWC mitigation

Improve livelihoods

Wildlife scouts

Withdraw resource rights

Regulated hunting

Increase law enforcement

Description

Designate 25% or 50% of revenue sharing funds specifically to fund human wildlife conflict mitigation

Support wildlife friendly enterprise schemes to improve livelihood options available to offenders

Employ village wildlife scouts to act as link between communities and UWA, respond to HWC

Withdraw all rights to harvest resources from within protected area boundaries

Allow a regulated trade in specific species, provided sustainability of offtake could be ensured

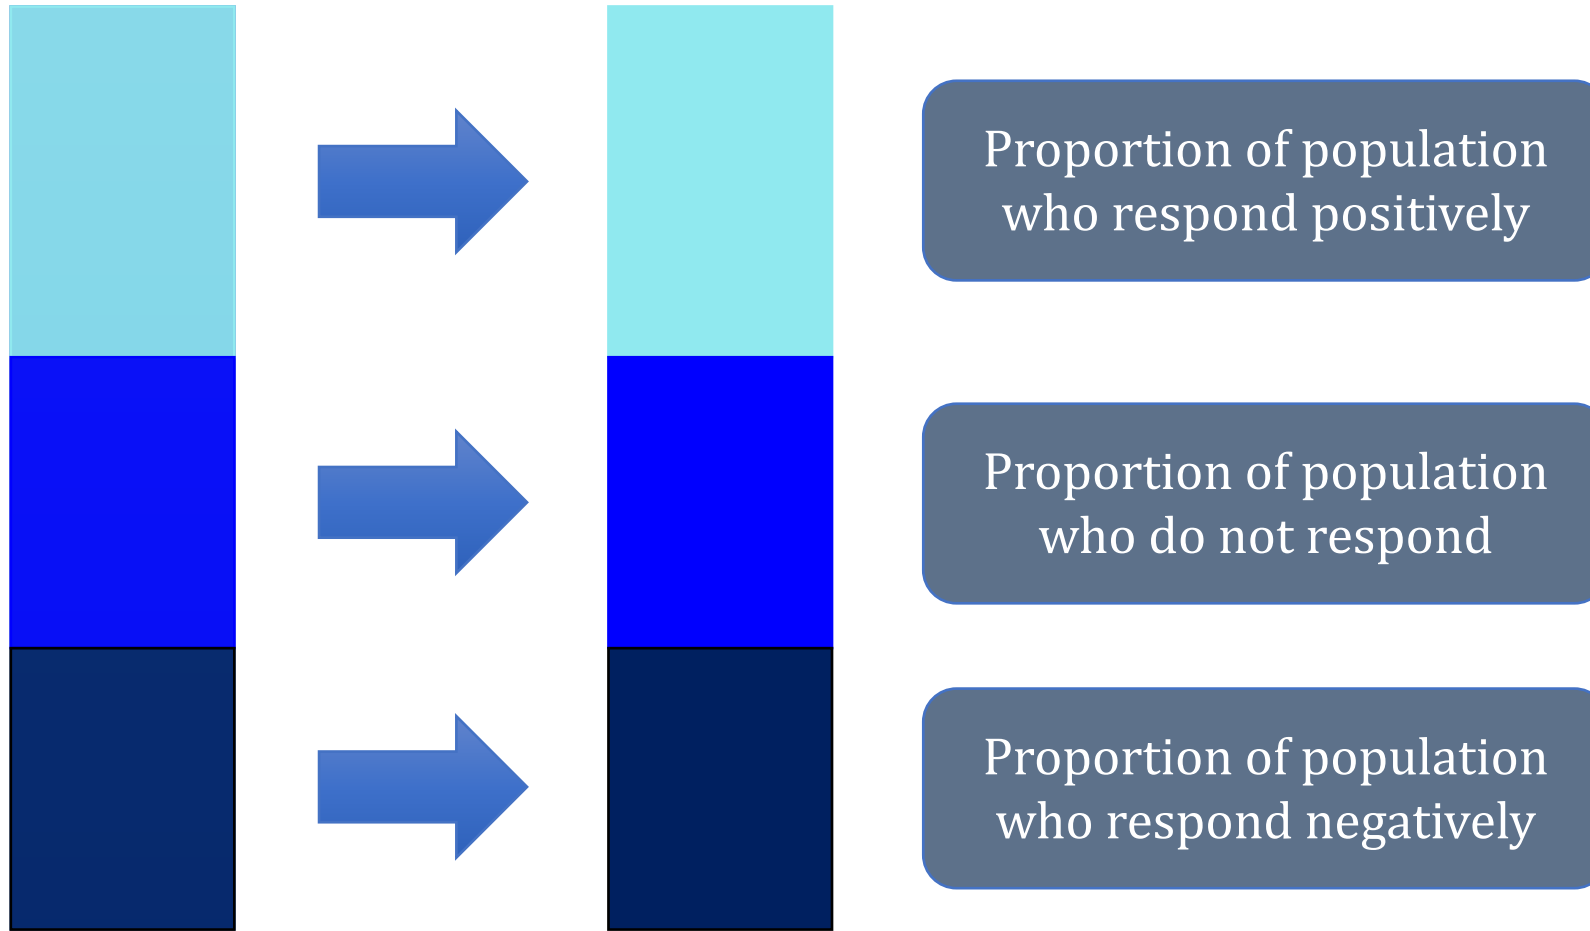

Increase the probability of detection of wildlife crimes within protected area boundaries

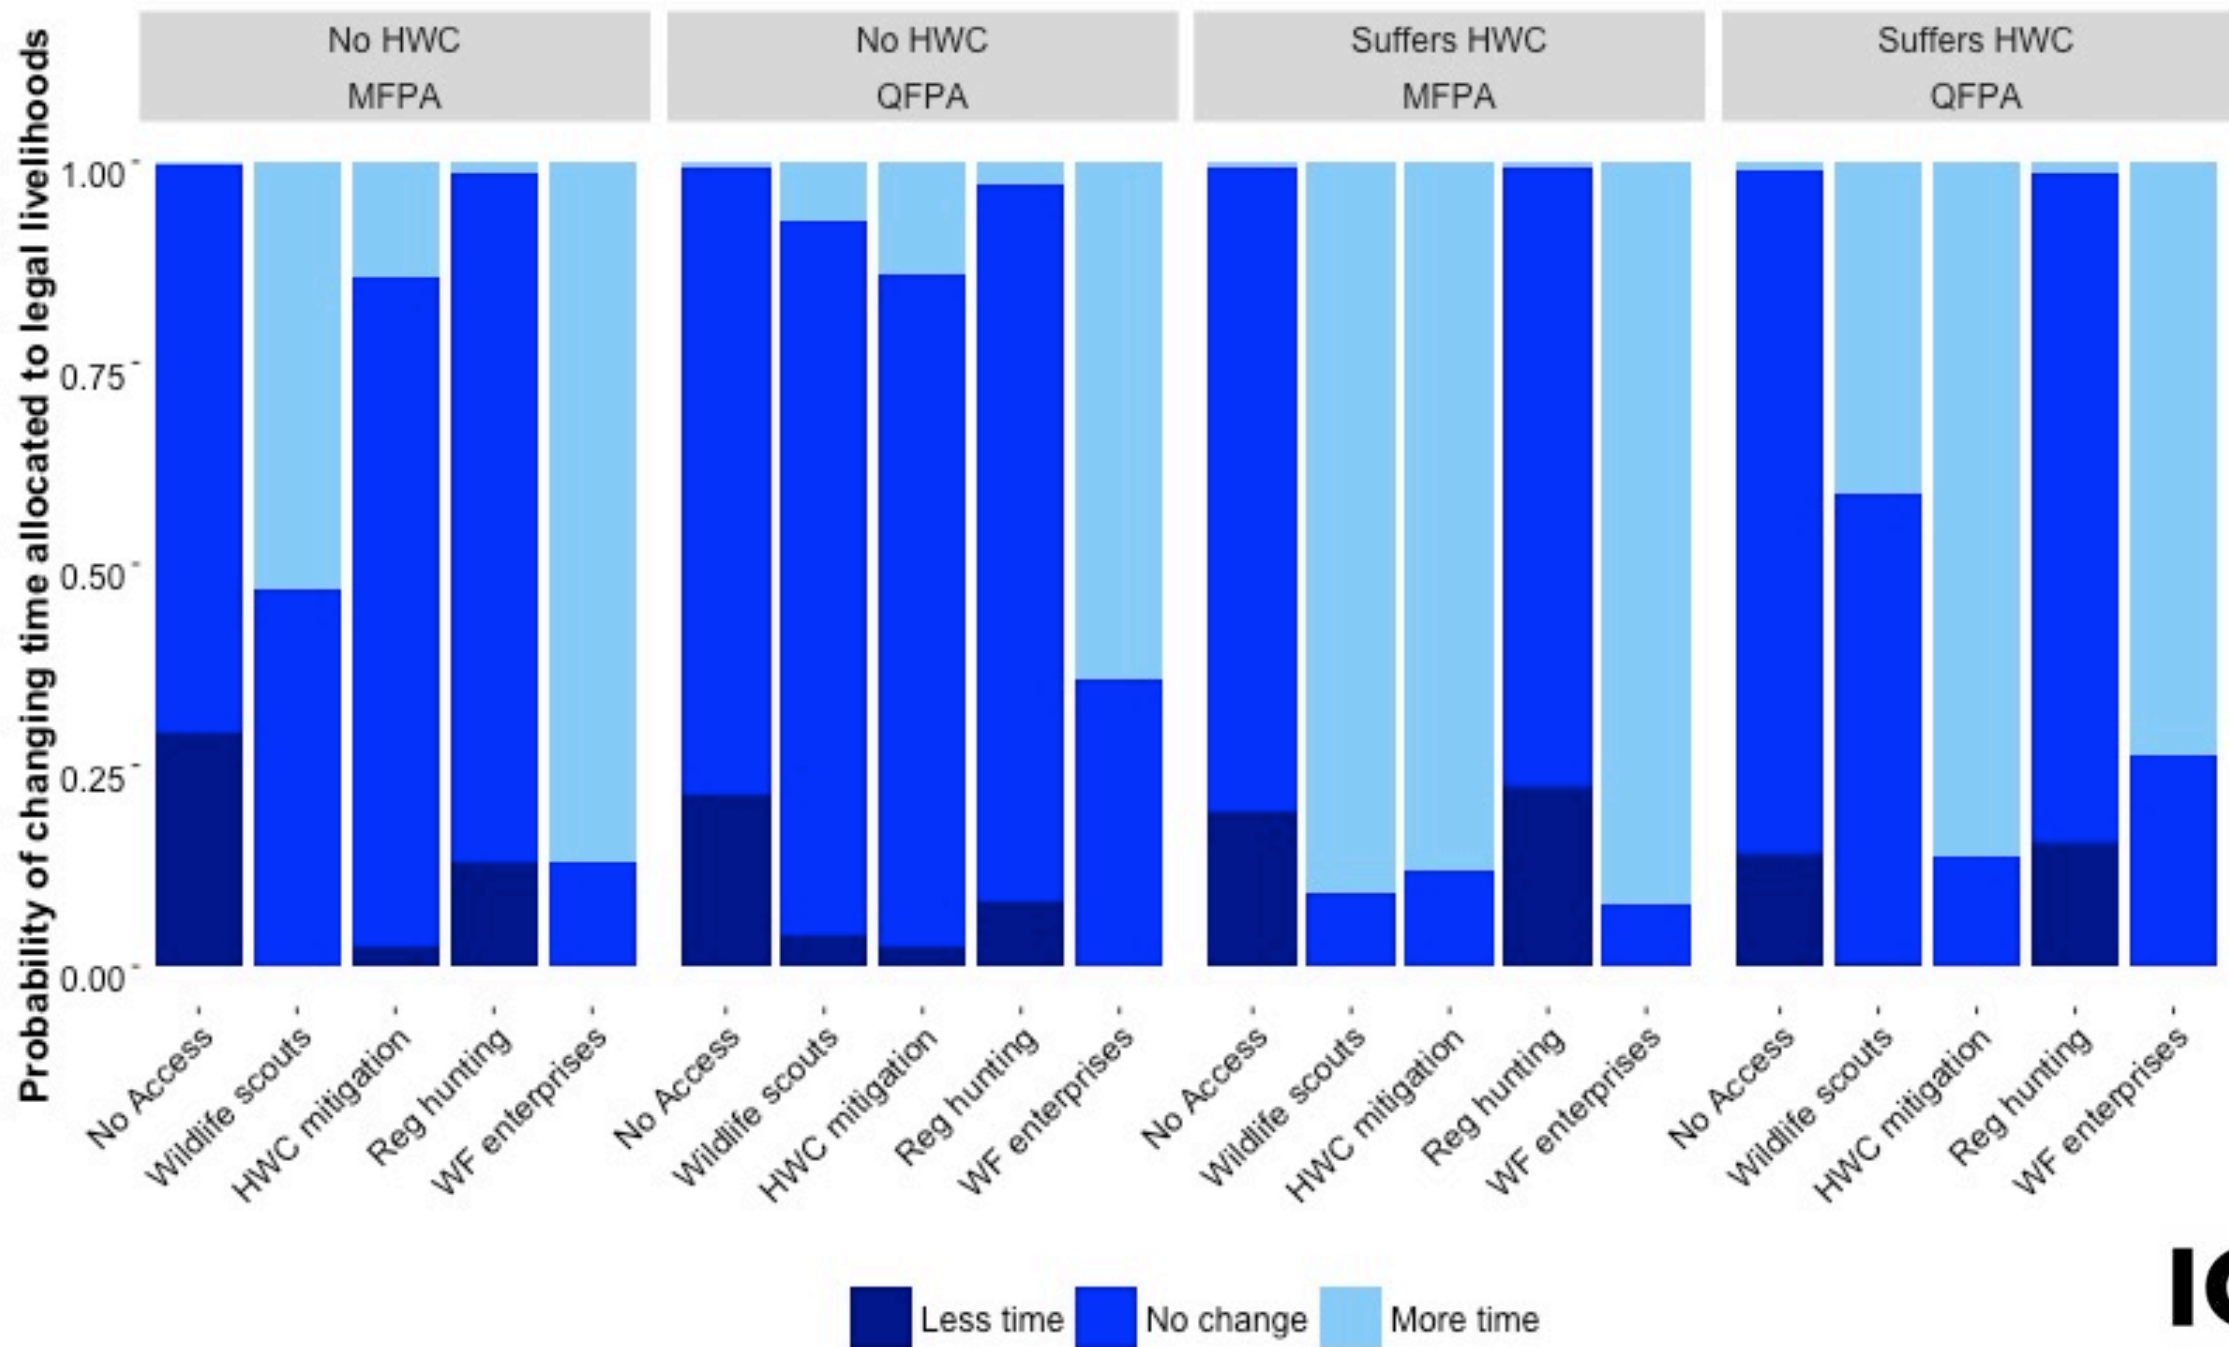

Labour allocation to legal
livelihood activities

Perceived fairness of
intervention

Provision of information
about illegal behaviour

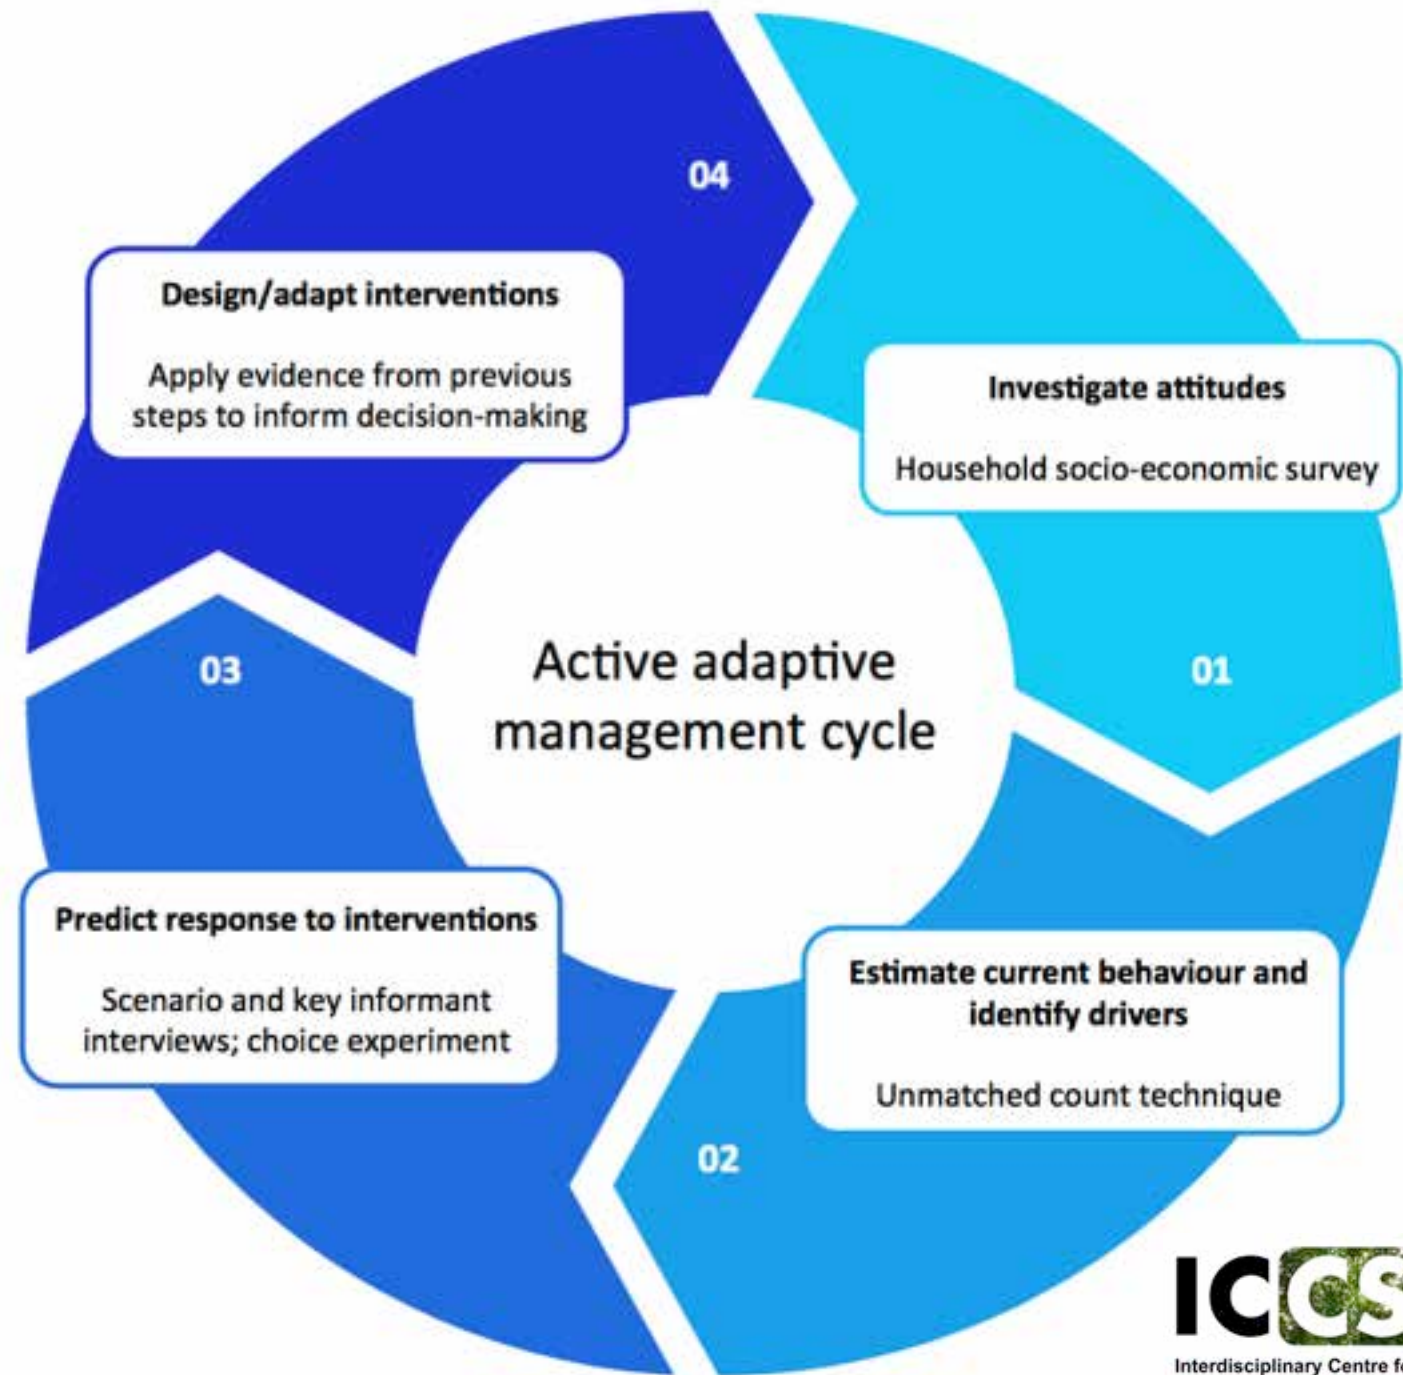

Attributes		Scenario 1	Scenario 2
	Human Wildlife Conflict	1/2 (50%) RS funds to HWC	No RS funds to HWC
	Employ eco-guards	No eco-guards employed	2 eco-guards in your village employed
	Chances of being caught hunting illegally	1 out of 1000 people caught hunting illegally	1 out of 10 people caught hunting illegally
	Sustainable hunting for meat (domestic use)	Hunting allowed for domestic consumption	Hunting not allowed
	Wildlife-friendly enterprise schemes	No scheme, no benefit	Scheme; participants earn Ugx 5,00,000/yr
Which scenario do you prefer (tick one)?			

Coefficient	Posterior mean (95% credible interval)	
	Murchison Falls NP	Queen Elizabeth NP
Human wildlife conflict mitigation	0.05 (-0.23, 0.34)	1.0 (0.60, 1.45)
Wildlife scouts	0.38 (0.20, 0.59)	0.64 (0.37, 0.97)
Wildlife friendly enterprises	0.49 (0.19, 0.83)	0.35 (0.03, 0.68)
Increased patrol effectiveness	0.09 (0.01, 0.17)	0.23 (0.12, 0.36)
Regulated hunting	-0.14 (-0.28, -0.02)	-0.08 (-0.20, 0.04)

- How big is the problem?
